

Supplemental Figure 3 Descriptions

- 1) The number of differentially expressed genes between traps triggered with and without prey at 1 hr and 24 hr time points. Color shows which treatment had statistically higher expression.
- 2) The number of differentially expressed genes at the 1 hour time point found amongst the top 8 Gene Co-Expression modules. Color shows which treatment had statistically higher expression.
- 3) The number of differentially expressed genes at the 24 hour time point found amongst the top 8 Gene Co-Expression modules. Color shows which treatment had statistically higher expression.
